

Poverty in Romania, a way to destroy our future

One of the main concerns in Romania is the lack of well-being of our citizens.

We ended up here because of the poor education that our predecessors got. We are in a very tough situation when we're talking about children and their future. Sadly, if we don't stand up, the situation will only get worse, because in the end this is happening due to us. The people became skeptical concerning the future of the next generations and this evolved into a massive state of inadvertency. We, the people, need to take the matter in our hands and solve this problem as fast as we can!

Children playing with garbage while their parents are searching for food
