

## Lunca Argeşului - Source of relaxation

Caloianu Monica Elena

Lunca Argeşului is the place of relaxation for both the little ones and the big ones. The park still represents a problem partially solved by the local authorities. The access road from the river dam becomes dangerous because of the rains. Cyclists who come from the river bank, wanting to reach the arranged tracks, are subject to challenges. Because of the rains, the unpaved track is dangerous. Let's not forget that sometimes the garbage from the river appears on the access road. The mixture of gravel, sand and damp earth removes the fearful elders. Let's remember what this place was like before. A meadow, a small forest on the edge of the water, favorable for needy children who played freely. What is it now? As a result of the investments of the mayor's office, the park has been modernized, even transformed into an oasis of peace and oxygen. Specially arranged playgrounds, the possibility to practice outdoor sports have become everyone's attraction. We hope that the financial investments will continue to be reflected in the splendid project spread over 24 hectares. In order to protect the environment, the inexhaustible source of energy, the people of Pitesti will find in the park: ecological toilets, lighting poles that use solar energy, garbage storage spaces and... good cheer!
